Central Coast Green Grid

2020, reviewed 2022

POTENTIAL PROJECTS LIST

**Note: Some are funded or some may not be funded or some stages partially funded*

This data informs a series of strategic opportunities for building the Central Coast Green Grid within each social planning district.

This report is one step in an ongoing dynamic process. It provides preliminary listing of Green Grid opportunities, in terms of their strategic merit as potential catalysts for the establishment of an interconnected green grid network which will support sustainable and quality urban growth. Future reports should be undertaken to assess the future delivery and implementation strategies of Green Grid projects.

The projects listed in this report are not endorsed by Council, nor has detailed costing assessment been undertaken.

Green Grid project opportunities have been identified, and preliminary prioritisation will be informed by a comprehensive consultation process with stakeholders, including landowners and state and local government agencies in the next stage which will focus on the social planning district implementation phase.
